

EXAMPLES OF SOME HTML TAGS

1. **Paragraph (Paragraph tag):** The paragraph tag `<p>` offers a way to structure your text into different paragraphs. Each paragraph of text should go in between an opening `<p>` and a closing tag `</p>`.
2. **Links [Link tag]:** The link tag `<a>` defines the relationship between the current document and an external resource. Its basic function is to make a reference, from an HTML document to a resource, which can be itself another document.
3. **Lists (ordered/unordered) [List tag]:** The HTML List tag is used for specifying a group of item (list item). The list item could be ordered `` (in which items are in a numbered list) or unordered `` (one in which item is bulleted—bullet list).
4. **Buttons [Button tag]:** It creates the (clickable) button which is used to trigger an action or a response from the server side when the user clicks it. It can be created using the button tag `<button>` or the `<input>` tag.
